Instructions for Immunohistochemistry (IHC)

The MHPL offers IHC services that provide consistent results for large and small scale projects on formalin fixed, paraffin embedded (FFPE) or frozen tissues.

Sections to be stained (paraffin or frozen) should be brought to the MHPL or they can be generated by the MHPL. The tissue must be accompanied by a completed Histology & Immunohistochemistry Requisition form. Please contact the MHPL to determine if we have the optimized antibodies ready for your needs. We are constantly increasing the number of antibody stains that we offer.
