

CEERIAS

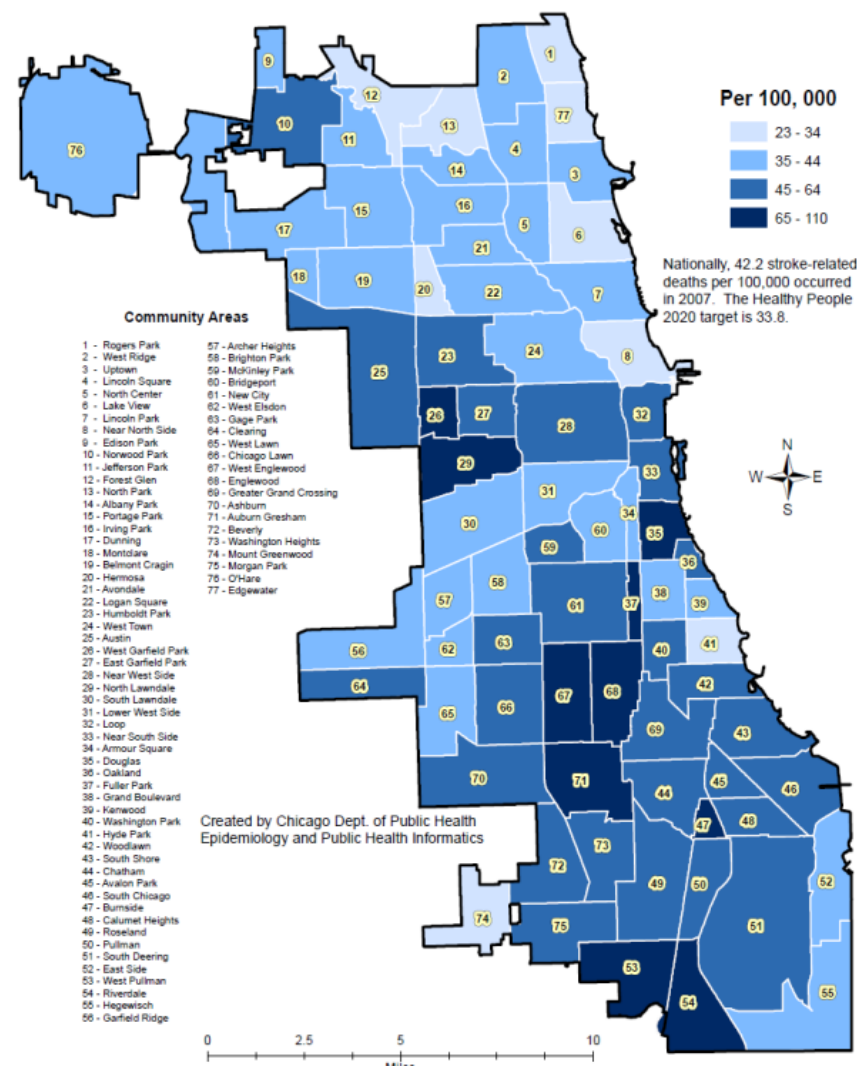

Community Engagement for Early Recognition and Immediate Action in Stroke

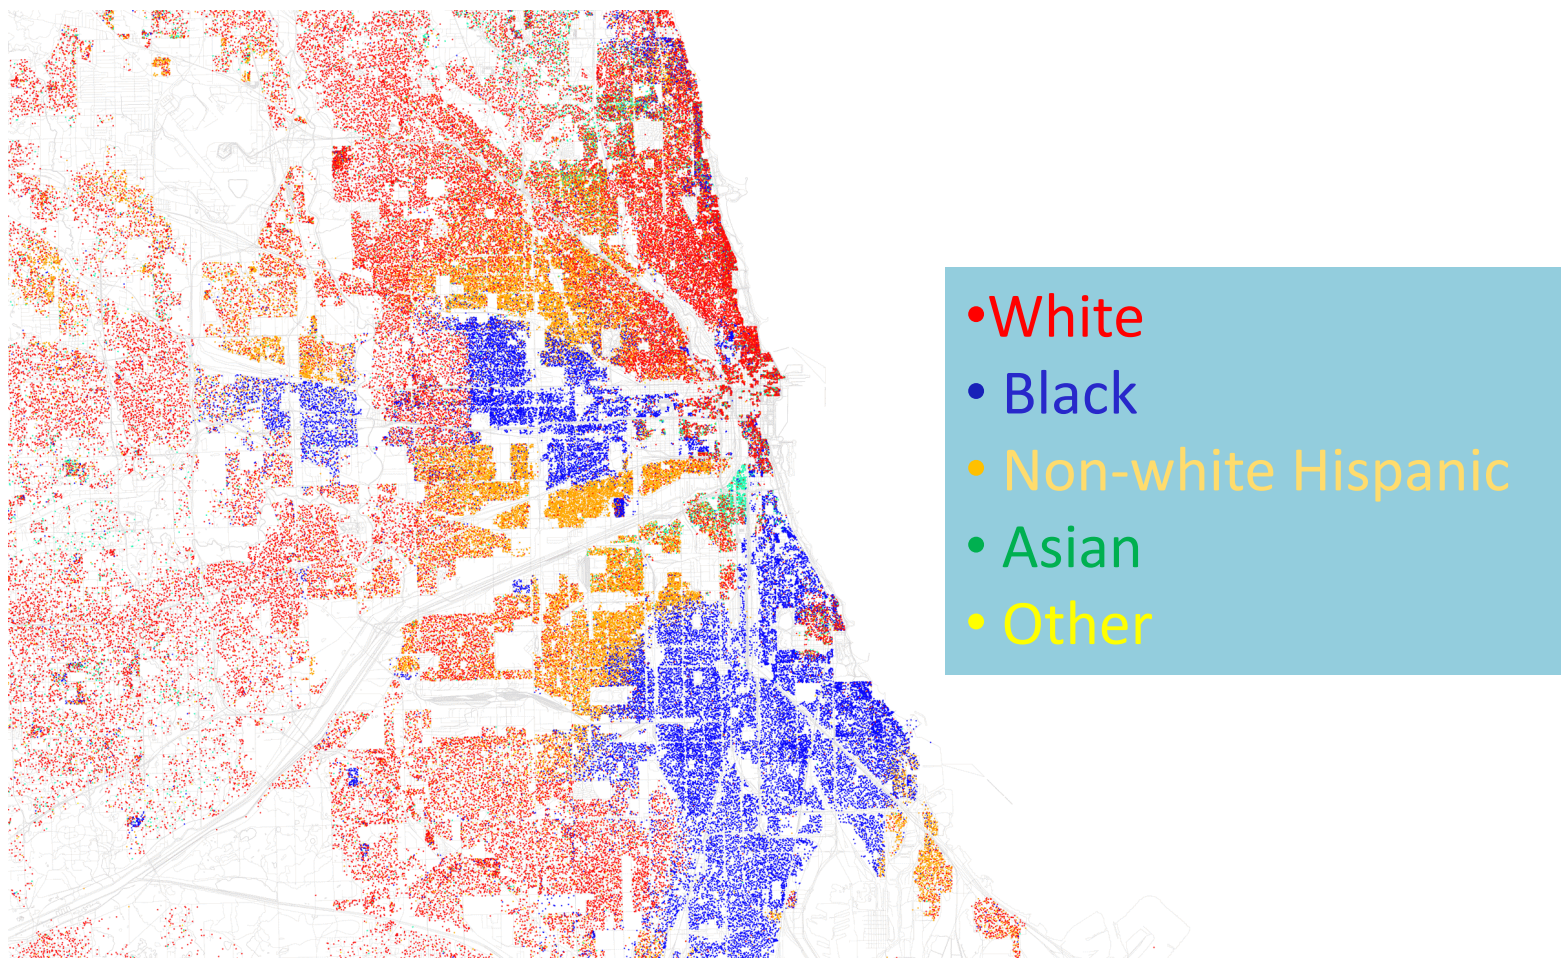

IPHAM PCORI Panel Discussion

1/15/15

Background

- Stroke is time-critical disease
- Major cause of disability and death in US
- Disproportionately affects minorities
- Delay in hospital arrival and treatment is major driver of poor outcomes
 - Only 25% arrive within 3 hours of symptom onset
- Race-ethnic disparities exist in stroke awareness, recognition, appropriate action, and acute treatment (i.e., tPA)

Community Engagement for Early Recognition and Immediate Action in Stroke (CEERIAS) Study

Preliminary Data

PCORI Themes

Assessing Prevention, Diagnosis, and Treatment Options

- Self-care
- Caregiver Support
- Palliative Care

Improving Healthcare Systems

- Care transitions
- Telemedicine
- Patient Navigators
- Collaborative Care

Addressing Disparities

- Cultural/Language Training
- Community Health Workers
- Self-management

Communication & Dissemination Research

- Shared Decision-making
- Parental Support in Pediatric Illness

CEERIAS Timeline

- 2008-2010: Assessment from GWTG data
- 2011: Patient testimonials
- 1/2012: Community Outreach Working Group
- 5/2012-12/2012: Five town halls conducted
- 1/2013: QUESTS-decrease DTN time (increase 911 use)
- 3/2013: Community Advisory Board (mock)
- 5/2013-9/2013: Monthly calls with CAB to define question
- 12/2013: In-person CAB meeting to finalize proposal
- 1/2014: Submitted to PCORI
- 7/2014: Awarded
- 10/2014: Contract started

CEERIAS: PCORI Award

- 325 submissions in the winter cycle
 - 10.2% award rate overall
 - 8.3% of proposals awarded on first submission
 - Only 1 of 6 awarded addressing disparities
- Team effort from start was key

CEERIAS Research Team

Shyam Prabhakaran (Administrative PI) Neelum Aggarwal (Intervention PI) **Knitasha Washington (Community PI)**
Peggy Jones Amy Eisenstein Namratha Kandula Christopher Richards Jen Brown Sarah Song Maryann Mason
Soyang Kwon Carlos Corado (Study Coordinator) **Heather Beckstrom (Community Coordinator)**

Marta Pereyra
Kathleen O'Neill
Esther Sciammarella

Tom Behrens
Kimberly Rogers
Amanda Kelley
Kirsten Peachey

Consultants

Ronald Ackermann
Zeeshan Butt

Types of Engagement

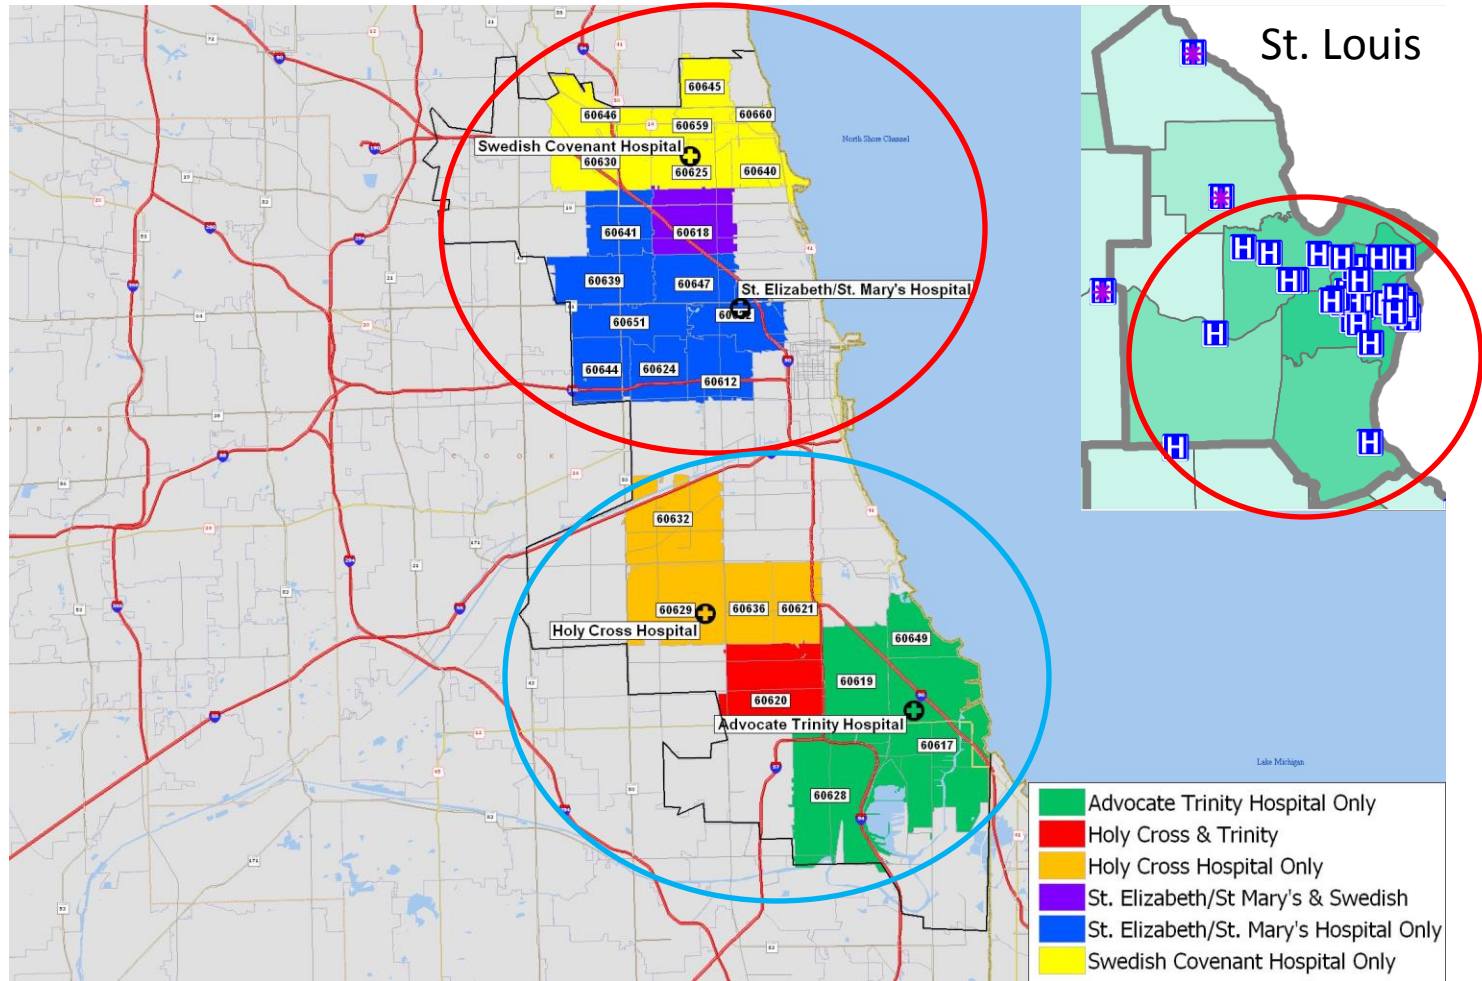

Approach

Aims

- 1) To **examine** personal, community, and cultural **barriers** to calling 911 after stroke onset and adapt a **culturally-tailored intervention** for delivery surrounding 2 hospitals on the south side of Chicago
- 2) To **implement** a culturally-adapted stroke awareness and action **program** and monitor its penetration and adoption using the RE-AIM framework in the south side of Chicago
- 3) To **assess change** in early hospital arrival and EMS use at 2 intervention hospitals before and after the community intervention.

Comparative Effectiveness

Patient-centeredness

- Pre-submission
 - Identified a topic that patients and families have emphasized as important to them (stroke related disability and disparities in acute stroke)
 - Ensured primary outcome resonated (EMS use and early arrival)
 - Helped select community in Chicago to target (South Side)
- Since awarded (planned)
 - Glean patient, caregiver, lay community member views, perceptions, and ideas (Aim 1)
 - Adapt and refine planned intervention based on community input and cultural needs (Aim 1)
 - Deliver intervention by means that are trustworthy and effective based on community input (Aim 2)
 - Disseminate results

Patient/community engagement

- Multiple stakeholders (CAB, organizations) took part in shaping the research question and reviewing proposal over 1 year (2013)
- Shared governance since beginning
 - CAB has reviewed and modified all key pieces of the project thus far
 - Community PI and Community Coordinator
 - Patients/stakeholders represent 11 of 19 members of CAB and research teams
- Partnership building and reciprocal engagement
 - Giving back in form of on-site presence, materials, talks
 - Social media to ensure real-time engagement and dissemination
