Postdoctoral Research Training Fellowships in Behavioral and Psychosocial Aspects of Cancer Prevention and Control

This NCI-funded T32 postdoctoral training program at Northwestern University’s (NU) Feinberg School of Medicine (FSM) is currently accepting applications for two-year postdoctoral fellowship positions. The goal of the training program is to provide an outstanding mentored research and training experience for its postdoctoral fellows so that they become successful independent leaders in cancer research, aiming to reduce cancer risk, address disparities, and improve the lives and health outcomes of community members affected by cancer in a more efficient and more cost-effective fashion. The training program will function under the auspices of the Robert H. Lurie Comprehensive Cancer Center (RHLCCC) of Northwestern University, whose research programs in cancer prevention and control are nationally recognized for their scope and quality. The Program Director for Cancer Prevention is Dr. Bonnie Spring (bspring@northwestern.edu, Contact PI) and the Program Director for Cancer Control and Survivorship is Dr. Frank Penedo (fpenedo@northwestern.edu, MPI). The 24 participating mentors include 19 PhDs and 5 MDs from 8 departments at Northwestern. They include leading experts in the areas of cancer risk behaviors and screening, technology-supported behavioral and psychosocial interventions, symptom management, measurement science and patient reported outcomes, biobehavioral mechanisms in cancer, health disparities, and community engagement. Research experiences will be complemented by a weekly seminar, professional development activities, and an option to enroll in one of four relevant MS programs: MPH, MSCI, MSEB, or HSOR. FSM and the RHLCCC provide a rich platform for training and career development including a diverse and broad scientific portfolio of cancer-related studies, biostatistical and health informatics cores, expertise in multi-level assessment methods and technology implementation, and collaborative relationships across NU’s biomedical and life sciences campuses. Trainees will also have access to a vast array of exceptional educational resources made available by the University for all postdoctoral trainees, including biweekly sessions dedicated to career development and professional skills. Candidates are required to: (1) possess an MD, PhD, or other doctoral degree in a related discipline or be enrolled in an accredited doctoral degree program and fulfill all degree requirements prior to program entry, and (2) be a citizen or permanent resident of the United States at the time of application. Minority applicants are encouraged. To apply, please send a cover letter, curriculum vitae, statement describing research interests and experience, and at least one letter of recommendation to Prof Bonnie Spring (bspring@northwestern.edu).
