

BigFix Attestation Waiver

I understand that I should have completed the following activities prior to FSM IT encrypting my personal device:

- Full device backup
- Upgraded OS (see info below)
- Updated Anti-Virus

Windows System Requirements

- ✓ Microsoft Windows 7 Professional or higher
- ✓ Minimum 4 gb of RAM
- ✓ 300 mb of free hard drive space

Mac System Requirements

- ✓ OS X 10.8 or higher
- ✓ Minimum 4 gb of RAM
- ✓ 200 mb of free hard drive space

We will take all precautions necessary to be sure that your machine is encrypted successfully. However, if you have not completed the items above, we will not be able to encrypt your machine. Rarely, you could experience data loss or the inability to use your computer as a result of encrypting your computer. FSM IT will not be responsible for data loss or rendering the computer unusable after attempting to make your computer compliant for at home use.

You do have a choice to not update your system. Instead, you may use the webmail version of email (<http://www.northwestern.edu/webmail/>). The difference between web mail and a native client is you will not be able to download email to your computer through your native system (such as Outlook).

A full description of this project can be found on the Feinberg IT website here (<http://www.feinberg.northwestern.edu/it/big-fix/index.html>). Your signature reflects that you have read and understand the website/FAQ and the information contained in this document.
