Healthy Hearts in Manufacturing

WHAT IS HEALTHY HEARTS IN MANUFACTURING (HHM)?

HHM is a research program that partners with worksite health clinics to improve heart health and reduce disparities in cardiovascular care.

Participating clinics are provided with tailored, evidence-based coaching, electronic health record support, and data feedback and benchmarking.

The research team will evaluate the effectiveness of these supports on patient outcomes and company health spending.

WHY JOIN HHM?

Participation in HHM may help your worksite clinic:

- Expand the identification and treatment of patients at risk for cardiovascular disease
- Enhance infrastructure to report and use quality data to improve care
- Generate new opportunities for staff to earn continuing medical education (CME) credits

Participation in HHM may help your company:

- Improve cardiovascular health outcomes and reduce disparities
- Reduce health care spending by preventing cardiovascular events

Clinics will work directly with a dedicated HHM practice facilitator who is an experienced coach backed by a team of clinicians. Your practice facilitator will have the ability to:

- Share important, evidence-based clinical management tools and resources
- Suggest best practices for workflows related to cardiovascular disease prevention and management
- Assist with electronic health record documentation
- Provide additional information about quality improvement practices
