

Health and Function Research Fellowship

The goal of Northwestern's Health and Function Research Fellowship is to train highly skilled rehabilitation researchers in health services research. The Fellowship enhances our nation's research capacity and our graduates apply their skills broadly to address and ameliorate the health and function concerns of persons with disabilities and chronic illness.

The two-year training program provides MDs and PhDs with:

- Mentoring, protected research time, and annual stipend
- Tuition for didactic course work, original research, grant writing, and scientific publishing over the two-year program.
- Professional development opportunities, including funds for conference travel

This project utilizes the Shirley Ryan AbilityLab (formerly the Rehabilitation Institute of Chicago) as its clinical site. The AbilityLab has been named 27 consecutive years as the outstanding rehabilitation hospital in the country. It sponsors the largest education and training center of any rehabilitation facility in the nation.

The fellowship is funded by the National Institute on Disability, Independent Living, and Rehabilitation Research and applicants research must be aligned with [NIDILRR's long range plan](#).

We welcome emails from prospective applicants.

Recommended application deadline: August 15, 2019

Tentative start date: On or after September 1, 2019
