CTC Fellowships

The Comprehensive Transplant Center (CTC) Education Core is responsible for all of the educational programming for the CTC. One of the primary activities is facilitating fellow recruitment and managing the fellowship programs. The CTC is home to fellowships in Transplant Surgery, Transplant Nephrology and Transplant Research.

The 2-year ASTS-accredited Transplant Surgery Fellowship allows the trainee to develop proficiency in the surgical and medical management of patients with end-stage organ diseases amenable to transplantation. Each year two fellows join the program. Please join us in welcoming Alex Darani, MD and Davy Woodland, MD. They are joining Matt Sanders, MD, Caroline Lemoine, MD and Cesar Escareno, MD.

The Transplant Nephrology Fellowship is a 12-month program accredited by the American Society of Transplantation (AST). These fellows are involved in all aspects of caring for our kidney and pancreas transplant patients and are encouraged to be responsible for at least one major clinical transplant research project. This year we welcome Daniel Fantus, MD, MSc & Eman Shaban, MBBS to the team.

Funded by the National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK), a part of the National Institutes of Health, via the T32 mechanism, our Transplant Surgery Scientist Training Program (TSSTP) is focused on exposing fellows to scholars and researchers from different disciplines and fields. During this 24-month program fellows will be on either the NUTORC or NUCTRIBE track. Current fellows are: Kofi Atiemo, MBCHB; Stephen Chiu, MD; Jessica Brown, PhD; Ramiro Fernandez, MD

While not coordinated by the CTC Education Core, there are two transplant hepatology fellows that work with our team, Christine Chan, MD and Stacey Prenner, MD. By the end of this one-year fellowship, fellows will be eligible for board-certification in Transplant Hepatology.

You can learn more about these fellowships and the application process by contacting us via email at ctc@northwestern.edu.
